

ABSTRACT

[0079] A method for decreasing a computer application's start-up time. In one aspect, the method comprises: creating a serialized representation of application objects in a runtime environment; building an object code file using the serialized representation; and providing the application to a new runtime environment. In another embodiment the method may include the steps of: compiling an application provided in an source language; initializing the application in a runtime environment; and creating a serialized representation of the application.
